

Table of Contents

Introduction	1
From COM to .NET	1
Designing CSLA .NET	2
What's covered in this book?	3
What you need to use this book	4
Conventions	5
Customer support	6
How to download sample code for this book	6
Errata	6
Chapter 1: Distributed architecture	9
Logical and physical architecture	10
Complexity	11
Relationship between logical and physical models	12
The logical model	12
The physical model	13
A 5-tier logical architecture	17
Presentation	17
UI	18
Business logic	18
Data access	19
Data storage and management	20
Applying the logical architecture	20
Optimal performance intelligent client	21
High scalability intelligent client	21
Optimal performance web client	22
High security web client	23
The way ahead	24
Managing business logic	24
Potential business logic locations	25
Business logic in the data management tier	25
Business logic in the UI tier	26
Business logic in the middle (business/data access) tier	27
Business logic in a distributed business tier	27

Table of Contents

Business objects	28
Business objects as smart data	29
Anatomy of a business object	30
Distributed objects	31
A new logical architecture	33
Local, anchored, and unanchored objects	33
Complete encapsulation	37
Architectures and frameworks	38
Conclusion	39
Chapter 2: Framework design	43
Basic design goals	44
n-Level undo capability	47
Tracking broken business rules	49
Tracking whether the object has changed	50
Strongly-typed collections of child objects	50
Simple and abstract model for the user interface developer	51
UI in charge	52
Object in charge	53
Class in charge	55
Supporting data binding	56
Enabling our objects for data binding	57
Events and serialization	58
Object persistence and object-relational mapping	59
Relational vs. object modeling	60
Object-relational mapping	61
Preserving Encapsulation	62
Supporting physical n-tier models	64
Table-based security	66
Framework Design	67
Business Object Creation	69
BusinessBase	69
BusinessCollectionBase	70
ReadOnlyBase	71
ReadOnlyCollectionBase	71
NameValueCollection	71
SafeSqlDataReader	72
SmartDate	72
n-Level undo functionality	73
UndoableBase	74
NotUndoableAttribute	75
Data binding support	76
BindableBase	77
BindableCollectionBase	78
IEditableObject	78
Business rule tracking	79
BrokenRules	80
RulesCollection	80
Rule structure	80

Data portal	81
The client-side DataPortal	82
The server-side DataPortal	85
DataPortal behaviors	88
Table-based security	95
Custom principal and identity objects	95
Using DataPortal	95
Integration with our application	96
Namespace organization	97
Component design	98
Conclusion	100
 Chapter 3: Key technologies	 103
<hr/>	
Remoting	104
Basic concepts	104
Channels	105
Formatters	105
Listener	106
Object proxies and location transparency	106
Remoting configuration	107
Remoting servers	107
Creating the DLL	108
Creating the IIS host	110
Testing with the browser	112
Remoting clients	113
Configuring remoting	115
Using the binary formatter	117
 Serialization	 118
Types of serialization	119
The <Serializable(> Attribute	120
The <NonSerialized(> Attribute	120
Serialization and Remoting	121
Manually invoking serialization	124
 Enterprise Services (COM+)	 125
Enterprise Services and COM+ contexts	126
Running code in Enterprise Services	127
Using Enterprise Services directly	127
Installing the assembly into COM+	128
Using Enterprise Services indirectly	129
Two-phase distributed transactions	130
 Reflection	 132
Working with types	132
Getting a Type object	132
Getting information from a Type object	133

Table of Contents

Attributes	136
Creating custom attributes	136
Simple attributes	136
Restricting attribute usage	137
Detecting custom attributes	137
.NET role-based security	138
ADO.NET	139
ADO.NET architecture	139
Data providers	139
The DataSet object	140
Data provider and DataSet interaction	140
Basic use of ADO.NET	142
Connecting to a database	143
Reading data with a data reader	144
Updating data	149
ADO.NET transactions	151
Conclusion	152
Chapter 4: Business framework implementation	155
Setting up the CSLA .NET solution	157
CSLA.Core.BindableBase	157
Core.BindableBase	159
Core.BindableCollectionBase	160
CSLA	164
NotUndoableAttribute	166
Core.UndoableBase	166
Helper Functions	168
CopyState	169
UndoChanges	175
AcceptChanges	177
BusinessBase	178
Tracking basic object status	179
Object editing	183
Object cloning	186
Root and child objects	187
Deleting objects	189
Edit level tracking for child objects	190
BrokenRules	191
Rule data type	193
RulesCollection	195
BrokenRules	198
Exposing BrokenRules from BusinessBase	200
BusinessCollectionBase	201
Creating the class	202
Clone method	203
Contains method	203
Root or child	204

Edit level tracking	204
Reacting to insert, remove, or clear operations	205
Deleted object collection	206
Deleting and undeleting child objects	207
CopyState	211
UndoChanges	212
AcceptChanges	213
BeginEdit, CancelEdit, and ApplyEdit	214
IsDirty and IsValid	215
ReadOnlyBase	216
ReadOnlyCollectionBase	217
Clone method	217
Preventing changes	218
SmartDate	219
Supporting empty dates	220
Conversion functions	221
Text functions	223
Date functions	224
Date manipulation	224
Database format	225
Conclusion	225
 Chapter 5: Data access and security	 229
 A note about object-oriented programming	 230
CSLA	232
BusinessBase	232
DataPortal methods	233
Save method	234
DB Method	235
BusinessCollectionBase	236
ReadOnlyBase	238
ReadOnlyCollectionBase	239
Client-side DataPortal	240
TransactionalAttribute	242
DataPortal	242
Helper methods	244
Creating the server-side DataPortal	245
Handling security	248
Data access methods	249
CSLA.Server.DataPortal	253
Server.DataPortal	254
Creating the assembly	254
Creating the DataPortal class	255
Helper functions	256
Data access methods	261
Updating the CSLA project	264

CSLA.Server.ServicedDataPortal	265
Transactional DataPortal	265
Creating the assembly	265
Creating the DataPortal class	267
Data access methods	268
Updating the CSLA project	269
DataPortal remoting host	270
Server-side DataPortal host	271
Reference CSLA assemblies	272
Add a Web.config file	272
Configure remoting	273
Registering ServicedDataPortal	274
Testing remoting	274
Making the DataPortal useful	274
CSLA.Security	278
Security table	278
Creating the database	279
Adding tables	280
Adding a stored procedure	282
Configuring database permissions	283
Creating the database project	284
Providing test data	286
BusinessIdentity	287
Creating a business object	288
Implementing IIdentity	292
Exposing the roles	293
BusinessPrincipal	293
Implementing IPrincipal	294
Login process	294
Utility classes	298
SafeDataReader	298
Creating the SafeDataReader class	299
NameValueList	301
Creating NameValueList	303
Conclusion	308
Chapter 6: Object-oriented application design	311
Application requirements	312
Use cases	313
Project maintenance	314
Resource maintenance	314
Assigning a resource	315
External access	315

Object design	316
Initial design	316
Revising the design	318
Duplicate objects	319
Trivial objects	319
Overly complex relationships	319
Optimizing for performance	324
Reviewing the design	325
Using CSLA .NET	327
Database design	330
Creating the database	331
Tables	331
Roles	332
Projects	332
Resources	333
Assignments	333
Database diagram	334
Stored procedures	336
getProjects	337
getProject	337
addProject	338
updateProject	338
deleteProject	338
addAssignment	339
updateAssignment	339
deleteAssignment	340
getResources	340
getResource	341
addResource	341
updateResource	342
deleteResource	342
Creating the database project	342
Database security	344
Conclusion	346
Chapter 7: Business object implementation	349
Business object lifecycle	349
Object creation	350
Root object creation	350
Child object creation	351
Object retrieval	354
Root object retrieval	354
Child object retrieval	355
Updating editable objects	356
Adding and editing root objects	357
Adding, editing, and deleting child objects	358
Deleting root objects	359

Table of Contents

Disposing and finalizing objects	360
Implementing IDisposable	360
Implementing a Finalize method	361
Business class structure	362
Common features	362
The Serializable attribute	362
Common regions	362
Private default constructor	364
Nested criteria class	365
Class structures	367
Editable root business objects	368
Editable child business objects	372
Switchable objects	376
Editable root collection	378
Editable child collection	381
Read-only business objects	384
Read-only collections of objects	386
Name-value list objects	388
Project tracker objects	390
Setting up the project	392
Business class implementation	393
The Project class	394
RoleList	410
Resource	411
Assignment	417
ProjectResource	420
ResourceAssignment	426
ProjectResources	429
ResourceAssignments	435
ProjectList	436
ResourceList	440
Conclusion	441
Chapter 8: Windows Forms UI	445
Windows Forms interface	446
Application configuration	447
Application configuration file	447
Configuring the DataPortal server	449
Main form	451
Menu	451
Status	452
Login form	454
The login dialog	455
Doing the login	457
Updating the menu	458
Using Windows' integrated security	459
Project list	460
ProjectSelect dialog	460

Project edit	462
ProjectEdit form	462
Updating the menu	475
Removing a project	477
Resource list	478
ResourceSelect dialog	478
Removing a resource	480
Resource edit	481
The ResourceEdit form	481
Updating the menu	487
Conclusion	489
Chapter 9: Web Forms UI	491
Web development and objects	491
State management	493
State on the web server	494
Using a web farm in ASP.NET	495
Transferring state to/from the client	496
State in a file or database	497
Web Forms interface	499
Application configuration	500
The Web.config file	501
Using a separate DataPortal server	502
UI overview	503
Default form	503
Login form and security configuration	505
Changing the Web.config file	505
Login form	506
Global.asax	509
Projects form	510
Setting up the form	511
Coding the form	514
ProjectEdit form	518
Setting up the form	518
Coding the form	521
The ChooseRole form	529
Setting up the form	530
Coding the form	530
The AssignResource form	534
Setting up the form	534
Coding the form	536
Resources form	538
The ResourceEdit form	540
Setting up the form	541
Coding the form	544
The AssignToProject form	550
Conclusion	553

Chapter 10: Web services interface	555
Overview of web services	556
SOAP	556
Message-based communication	557
SOAP and web services	557
SOAP, web services, and the .NET Framework	558
Web services as an interface	559
A web service for every tier?	560
A web service as the 'user interface'	561
Web services and contracts	562
Implementing a web services interface	563
Web service design	563
Deciding on web methods	564
Grouping web methods into web services	564
Returning our data	565
Security	567
Web service implementation	568
Creating the project	568
Creating the web service	571
Handling security on the server	572
Defining data structures	576
Get a project list	578
Get a project	580
Add or update a project	582
Delete a project	583
Resource web services	584
Web service consumer implementation	585
Creating the project	586
Handling security on the consumer	587
Calling web services	590
Conclusion	591
Chapter 11: Reporting and batch processing	593
What's not to like?	594
Dealing with distributed environments	595
Avoiding data transfer	595
Providing background processing	596
Dealing with object-oriented applications	596
Reporting and objects	596
Batch processing and objects	597
Batch queue server	598
CSLA.BatchQueue design	599
The role of the BatchQueueService object	600
The role of the BatchEntry object	601

The role of the BatchEntryInfo object	602
Security and user identities	603
Creating the BatchQueue assembly	603
IBatchEntry interface	604
BatchEntryInfo class	605
BatchEntries class	607
Client-side BatchQueue class	608
Server-side BatchQueue class	611
BatchEntry class	613
BatchJobRequest class	616
BatchQueueService class	618
Creating and running batch jobs	640
Creating a batch job	640
Submitting a batch job	642
Loading a DataSet from objects	644
The ObjectAdapter class	645
Operational scope	645
Setting up the class	646
GetField method	646
Automatic discovery of properties and fields	649
Populating a DataTable from an IList	653
Implementing the Fill methods	655
Reporting using ObjectAdapter	657
Conclusion	659
Appendix A: NetRun	661
No-touch deployment	661
Security considerations	662
Object serialization workaround	663
Reading application configuration settings	663
Preventing browser popup	664
NetRun design	665
NetRun implementation	667
Main module	667
Helper methods	667
Sub Main	668
RunApplication	669
Launcher class	671
RunApp	671
Serialization bug workaround	673
Set FullTrust security	674
Revoke FullTrust security	677
Installing NetRun	679
Using NetRun	679
Conclusion	680
Indexes	683
